Shall we should

1. User Management

- It allows the system to store, update, and manage personal and business data in an organized
- Additionally, it includes identity and RUC verification, ensuring that all registered clients are valid.
- This helps prevent errors, duplication of records, and the use of incorrect.

2. Task Management

- Handles the creation, updating, and deletion of tasks within the system.
- Each task can be clearly defined with relevant details such as description, deadlines and responsible parties.
- Tasks are assigned to assistants, allowing the manager to distribute workload efficiently.
- The system also enables tracking of task status (pending, completed, or overdue), providing real time visibility of task progress.

3. Performance Evaluation

- Each assistant has a set of tasks and a performance record that is continuously updated based on their activities.
- The system provides an objective evaluation of assistant performance, mainly based on criteria such as task completion.

- This allows managers to analyze productivity, identify strengths and weaknesses, and make informed decisions regarding improvements, feedback, or recognition.

4. Alert System

- The alert system is designed for the automatic generation of notifications related to task management.
- It helps detect pending tasks, notifying assistants in a timely manner by sending an email.
- These alerts reduce the risk of missed deadlines, improve task follow-up, and ensure smoother workflow.

5. Invoice Management for Completed Tasks

- Manages the automatic creation of invoices once tasks are completed.
- Invoices are automatically sent to the email address associated with the client.
- It ensures that all finished tasks are properly billed, reducing manual work and administrative errors.
- The invoice management process helps to efficient handling of client payments.

6. Activity Management by Manager and Assistant

- The manager manages: Tasks, people.
- The assistant executes: assigned tasks.
